Findings

CRITICAL - Local threat intel match

IOC matched the local known-bad intelligence list.

MITRE ATT&CK;: T1071.001 Application Layer Protocol: Web Protocols

Evidence: { "ioc_type": "domain", "ioc_value": "malware-test.example", "source": "http_host", "packet_number": 8, "wireshark_filter": "frame.number == 8" }

CRITICAL - Local threat intel match

IOC matched the local known-bad intelligence list.

MITRE ATT&CK;: T1071.004 Application Layer Protocol: DNS

Evidence: { "ioc_type": "domain", "ioc_value": "xj3k9q2z7m1p0a8c.biz", "source": "dns", "packet_number": 7, "wireshark_filter": "frame.number == 7" }

HIGH - Possible DGA domain

Domain structure has high entropy and weak language-like character patterns.

MITRE ATT&CK;: T1568.002 Dynamic Resolution: Domain Generation Algorithms

Evidence: { "domain": "xj3k9q2z7m1p0a8c.biz", "entropy": 4.0, "dga_score": 0.981, "packet_number": 7, "wireshark_filter": "frame.number == 7" }

MEDIUM - Suspicious HTTP user agent

HTTP request used a user agent that appears in the local suspicious list.

MITRE ATT&CK;: T1071.001 Application Layer Protocol: Web Protocols

Evidence: { "host": "malware-test.example", "uri": "/payload.exe", "user_agent": "python-requests/2.28", "src_ip": "10.0.0.5", "dst_ip": "198.51.100.23", "packet_number": 8, "wireshark_filter": "frame.number == 8" }

MEDIUM - Executable download over HTTP

HTTP URI suggests retrieval of an executable or script payload.

MITRE ATT&CK;: T1071.001 Application Layer Protocol: Web Protocols

```
Evidence: { "url": "http://malware-test.example/payload.exe", "method": "GET",  
  "packet_number": 8, "wireshark_filter": "frame.number == 8" }
```

MEDIUM - Connection to suspicious non-standard port

Traffic used a port commonly seen in malware labs, backdoors, or tunneling.

MITRE ATT&CK;: T1571 Non-Standard Port

```
Evidence: { "src_ip": "10.0.0.5", "dst_ip": "203.0.113.66", "dst_port": 4444,  
  "protocol": "TCP", "first_packet_number": 1, "packet_numbers_sample": [ 1, 2, 3, 4,  
  5, 6 ], "wireshark_filter": "frame.number in {1 2 3 4 5 6}" }
```
